YOUR MISSION

In the year 2254, the alien planet Vulgus, which is inhabited by giant mutant insects, attacked planet earth. There was a great war that ensued, but thanks to the Titan Warriors, a Special Ops unit of the United States Air Force, battled hard and defeated Vulgus.

4 years later, the planet Vulgus has rebuilt and is ready for another war against Earth. Wolf Jack, new leader of the Titan Warriors, is in charge of the war against the Vulgus. This time they plan on finishing what they started, destroying the entire planet of Vulgus so they insects will never come back to Earth.

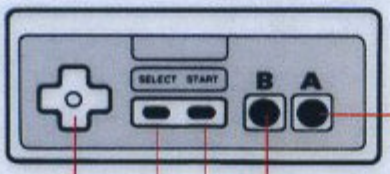
CONTROLS



A BUTTON
- Launch Side Cannons

B BUTTON
- Shoot

CONTROL PAD

SELECT

START
- Pause

POWER UPS

Side Cannons - You can launch them from the side of your ship to provide a wider range of cover, as they move back towards the ship. Incredibly useful.

Bomb - These were supposed to be put in the game, not available in this version

Vertical Laser - Fires a powerful laser straight ahead. Not the most useful of the power-ups but definitely pick it up if you have nothing better. The only real issue with this Laser is that it provides very little cover for the ship. In that sense, you may consider it with the side cannons.

Diagnonal Laser - You can fire rapid lasers diagonally. This is extremely helpful in boss fights but can be an issue in the main game if you don't have side cannons. While two lasers are fired up at diagonals, nothing is fired straight ahead. Still, it is very useful for boss enemies.

Speed Up - Speeds up ship, good to get you out of sticky situations

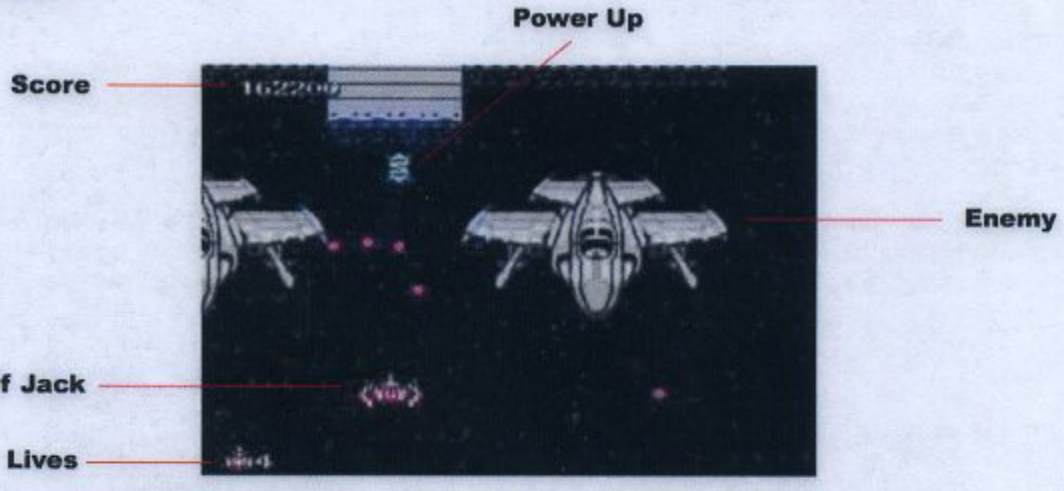
GAME SCREEN



STAGES AND BOSSES

There are 6 stages of gameplay, each representing a planet in our solar system (and Vulgus). Each stage has a Land Zone and a Space Zone, each with a Boss to defeat.

Mars

Jupiter

Saturn

Uranus

Pluto

Vulgus

Many of the bosses have weak spots you need to exploit them to destroy them and move to the next stage.
